## **Atlanta Sharing Alliance Coordination System Constraints**

**User:**

- Users must be authenticated.
- Users can only make modifications to the data for the specific site with which they are associated.

**Sites:**

- A site must provide at least one service.

**WaitList:**

- The default ranking for waitlist is first come first served.

**FoodBank:**

- Items cannot have a count of less than 1; items whose counts reach zero are deleted.

**Phase 1 Report**  
CS6400 – Spring 2017  
Team 081

- A meal is one unit each of a vegetable, nuts/grains/beans, and Meat/seafood or Dairy/eggs.

**Clients:**

- Users cannot see information for more than five clients at a time.

**Requests:**

- Users cannot request an item from the Food Bank associated with their site.
- Pending requests for an item that is deleted (generally because its NumberUnits has reached zero) are given the status closed with a NumFilled value of 0.

## Task Decomposition with Abstract Code

### Login/Authenticate User

#### Task Decomp

**Lock Types:** Read-only on Account table

**Enabling Conditions:** None

**Schemas:** Single

**Consistency:** Order is not critical

**Subtasks:** Mother Task is not needed. No decomposition needed

**Frequency:** Average user logons per day: 500

#### Abstract Code

- User enters *username* and *password* into form fields
- If data validation for *username* and *password*(\$*password*) fields is successful:
  - When **Logon** button is pressed:
    - If **Account** record is not found by username or if hash of **Account.password** != \$*password* then:
      - Go back to **Login** form with error message
    - Else
      - Store User information into session variable \$*user*
      - Retrieve **Site** record for \$*user* and store in \$*siteid*
      - Go to **Manage Services** form

## View Services

### Task Decomp

**Lock Types:** 3 Read-only lookups for User, Site, and Service  
**Enabling Conditions:** Successful login  
**Schemas:** Single  
**Consistency:** Order is not critical  
**Subtasks:** Mother Task is not needed. No decomposition needed  
**Frequency:** Medium

### Abstract Code

- Show the list of available **Services** associated with the **Site** by **\$siteid**
- Upon choice of:
  - *Food Bank* link, go to **Food Bank Request** form
  - *Soup Kitchen* link, go to **Modify Seat Capacity** form
  - *Shelter* link, go to **Modify Available Bunks** form

## Add/Edit/Remove Service

### Task Decomp

**Lock Types:** Inserts or Deletes to tables for a service  
**Enabling Conditions:** Service selected on **Manage Services** Form  
**Schemas:** 2 Schema constructs at a time  
**Consistency:**  
**Subtasks:** Mother Task is not needed. No decomposition needed  
**Frequency:** Rare

### Abstract Code

- User selects a **Service** by **Site** table's **ServiceCategory** to be changed as **\$serviceCategory**
- If the **Add** button is chosen:
  - If the **Site** already has an association to **\$serviceCategory** then:
    - Go to **Manage Services** Form, with error
  - Else
    - If **\$serviceCategory** == "FoodBank"
      - Insert record into **FoodBank** table for **\$siteid**
    - If **\$serviceCategory** == "FoodPantry"

**Phase 1 Report**  
CS6400 – Spring 2017  
Team 081

- Insert record into **FoodPantry** table for **\$siteid**
  - If **\$serviceCategory** == “Shelter”
    - Insert record into **Shelter** for **\$siteid**
  - If **\$serviceCategory** == “SoupKitchen”
    - Insert record into **SoupKitchen** for **\$siteid**
- Else if **Remove** is chosen:
  - Existing **Service** records for **\$siteid** are read into **\$serviceList**
  - If the count of is **\$serviceList** <= 1
    - Go to **Manage Services** Form, with error “Cannot remove last service”
  - Else
    - If **\$serviceCategory** == “FoodBank”
      - Delete record from **FoodBank** table for **\$siteid**
    - If **\$serviceCategory** == “FoodPantry”
      - Delete record from **FoodPantry** table for **\$siteid**
    - If **\$serviceCategory** == “Shelter”
      - Delete record from **Shelter** for **\$siteid**
    - If **\$serviceCategory** == “SoupKitchen”
      - Delete record from **SoupKitchen** for **\$siteid**

## View/Edit Number of Soup Kitchen Seats

### Task Decomp

### Lock Types:

**Enabling Conditions:** User’s site must have a soup kitchen

**Schemas:** Single

**Consistency:** View Number of seats, then edit

**Subtasks:** Viewing number of seats, Editing number of seats

**Frequency:** Rare

### Abstract Code

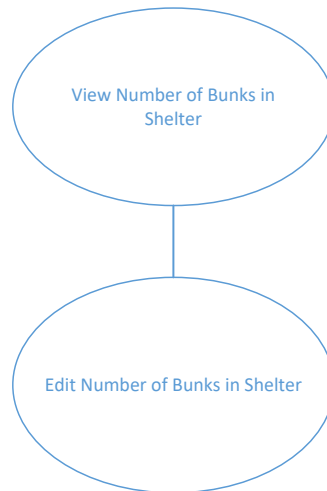

- User selects the option to **view** total seats available in the soup kitchen.
  - Application shows number of seats available.
- User selects the option to **edit** the number of available seats in the soup kitchen

**Phase 1 Report**  
CS6400 – Spring 2017  
Team 081

- Textbox displaying total number of seats is shown and enable for editing.  
(\$availableSeats)
- If user hits **Save** button:
  - Value in textbox is checked to ensure validity (e.g. value is a number, not greater than total seat capacity of the soup kitchen) and saved to database
- Else If user hits **Cancel** button:
  - Value in textbox is discarded, no changes are made to database.

## View/Edit Number of Bunks in Shelter

### Task Decomp

**Lock Types:** Read-only lookup on **Shelter** if viewing, Update lock if editing

**Enabling Conditions:** User's site must have a shelter

**Schemas:** Single

**Consistency:** View number of bunks, then edit

**Subtasks:** Viewing number of bunks, Editing number of bunks

**Frequency:** Often

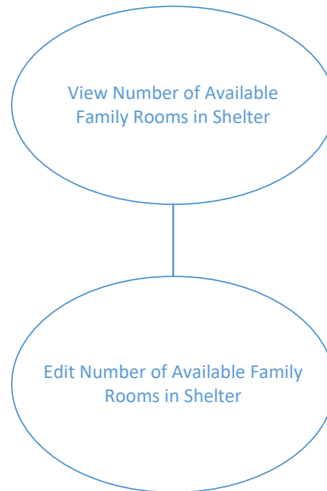

### Abstract Code

- User selects option to **view** number of bunks currently available in shelter
- Application queries **Shelter** table for \$maleBunkCount, \$femaleBunkCount, and \$mixedBunkCount, derives \$totalBunkCount, and displays form showing the total number of bunks available as well as a breakdown of male, female, and mixed-gender bunks available.
- If user selects option to **edit** the number of bunks in the shelter:
  - User is given option to edit either male/female/mixed bunks.
  - Textbox displaying number of selected bunk types is shown and is enabled for editing.
  - If user hits **Save** button:
    - Value in textbox is checked to ensure validity and value(s) are updated in the **Shelter** table.
  - Else If user hits **Cancel** button:
    - Value in textbox is discarded, no changes are made to database.

## **View/Edit Number of Family Rooms in Shelter**

### **Task Decomp**

**Lock Types:** Read-only lookup on [Shelter](#) if viewing, Update lock if editing

**Enabling Conditions:** User's site must have a shelter with family rooms

**Schemas:** Single

**Consistency:**

**Subtasks:** Viewing number of family rooms available, editing number

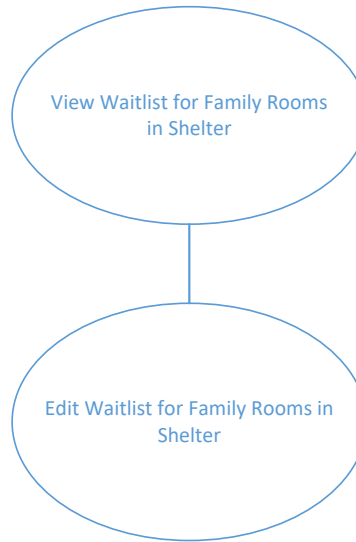

**Frequency:** Often

### **Abstract Code**

- User selects option to view number of family rooms currently available in shelter
- Application queries the [Shelter](#) table, returns the number of family rooms available (*\$familyRoomCount*), and displays to user.
- If user selects option to **edit** the number of family rooms in the shelter:
  - Textbox displaying number of family rooms is enabled for editing.
  - If user hits **Save** button:
    - Value in textbox is checked to ensure validity and the value is updated in the [Shelter](#) table.
  - Else If user hits **Cancel** button:
    - Value in textbox is discarded, no changes are made to database.

## View/Edit Waitlist for Family Rooms in Shelter

### Task Decomposition

**Lock Types:** Read-only lookup on **Waitlist** if viewing, Update lock if editing

**Enabling Conditions:** User's site must have a shelter with family rooms

**Schemas:** Single

**Consistency:**

**Subtasks:** Viewing waitlist, then edit

**Frequency:** Often

### Abstract Code

- User selects the **View Waitlist** button for family rooms currently available in shelter
- Application queries the **Waitlist** table and displays records associated with the user's shelter. Records are sorted with highest **\$Position** value on top.
- If user clicks the **Add** button:
  - Form for adding a client to the waitlist is displayed
  - The new record is inserted into the **Waitlist** table with the **\$ClientID** and a **\$Position** value, which is incremented from the current highest value.
- If user clicks the **Update** button:
  - All **\$Position** values displayed in the waitlist will become editable.
  - User clicks on the row they wish to edit and may change the client's position in the waitlist.
  - If user hits the **Save** button:
    - The record for the selected client in the **Waitlist** table will be Updated.
    - All **\$Position** values for clients with a position on the waitlist greater than the new position of the selected client will be incremented by one.
  - Else if the user hits the **Cancel** button:
    - Any values entered into the textboxes for any of the clients will be discarded and no changes will be made.
- If user clicks the **Delete** button:
  - A confirmation box will display to make sure that the user wants to delete the selected client.
  - If the user clicks **Yes**, the selected client record will be deleted from the **Waitlist** table.

## Grant/Deny Food Bank Request

### Task Decomp

**Lock Types:** Table lock on *RequestedItem* and *Item*

**Enabling Conditions:** User's Site has Food Bank, requested item exists

**Schemas:** 2 Schema constructs needed

**Consistency:** *RequestedItem.status*, *Item.NumberUnits* may be updated. Other pending requests for item may be closed.

**Subtasks:** Mother Task is not needed. No decomposition needed

**Frequency:** Medium usage

### Abstract Code

- Run the **Grant/Deny Food Bank Request** task for *Site* associated with *\$user*
- Find the current *RequestedItem* records for User's *FoodBank*; Display list by *Site.ShortName*, *Item.Name*, and *RequestedItem.NumRequested*
- For each user selected record:
  - If **Grant** button chosen and *quantity* field (*\$quantityToGrant*) validated
    - update *RequestedItem* table record *NumFilled* = *\$quantityToGrant*, *Status* = 'closed', and *Item* table *NumberUnits* = *\$availableUnits* - *\$quantityToGrant* for selected *Item.ItemId*.
    - If *Item* table *NumberUnits* = 0 for *Item.ItemId*
      - Find all *RequestItem.ItemId* = *Item.ItemId*
      - Update *NumFilled* = 0 and *Status* = 'closed'
  - If **Deny** button chosen
    - update *RequestedItem* table *NumFilled* = 0 and *Status* = 'closed'

## Make Food Bank Request

### Task Decomp

**Lock Types:** None, insert into *RequestedItem*

**Enabling Conditions:** User is authenticated and request is not being made to FoodBank at user's own site

**Schemas:** Single

**Consistency:** Order is not critical

**Subtasks:** Mother Task is not needed. No decomposition needed

**Frequency:** Medium

### Abstract Code

- Run the **Make Food Bank Request** task for Site associated with **\$user**
- Find the current **FoodBank** record; Display list by **Site.ShortName**
- Find the available **Item** records for **FoodBank** record **\$foodbank**; Display list by **Item** records **Name** and **NumberUnits**
- If **Request** button chosen
  - Insert into **RequestedItem** table **NumRequested** = **\$requestedUnits**, **Status** = 'pending', **\$foodbank**, **\$user**
  - Goto **Food Bank Request** form

### Retrieve Food Bank Item Data

#### Task Decomp

**Lock Types:** Read-only

**Enabling Conditions:** User is authenticated

**Schemas:** Single

**Consistency:** No required order

**Subtasks:** Mother Task is not needed. No decomposition needed

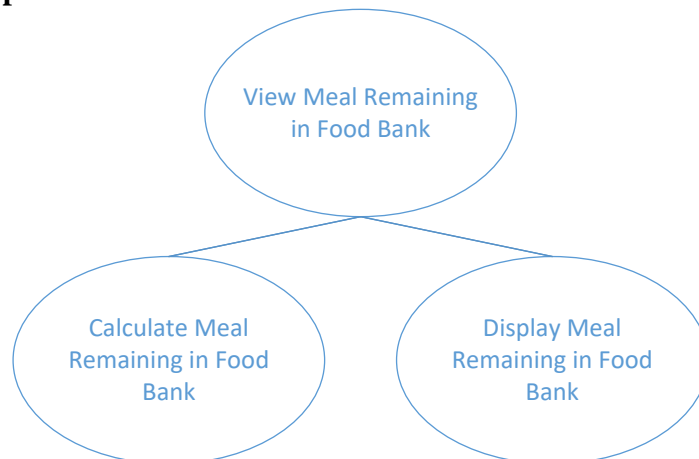

**Frequency:** Medium

### Abstract Code

- Run **Retrieve Food Bank Item Data** task with **\$siteId**
- Display **Item** record's **Name**, **StorageType**, **NumberUnits**, and **ExpireDate**

### View Meal Remaining in Food Bank

#### Task Decomp

**Phase 1 Report**  
CS6400 – Spring 2017  
Team 081

**Lock Types:** Read-only

**Enabling Conditions:** User is authenticated

**Schemas:** 2 Schema constructs

**Consistency:** not critical

**Subtasks:** Both tasks must be done sequentially. Mother task is required to coordinate subtasks.

**Frequency:** Medium

**Abstract Code**

- Run the **View Meals Remaining in Food Bank** task with  $\$siteid$
- Get the sum of each **Item** record's **NumberUnits** for each **FoodItem** record with **FoodCategory** of "Vegetable" as  $\$vegCount$ , "nuts/grains/beans" as  $\$nutsCounts$ , "Meat/seafood" as  $\$meatCount$ , and "Dairy/eggs" as  $\$dairyCount$
- Calculate  $\$totalMealCount$  as the minimum of [ $\$vegCount$ ,  $\$nutsCounts$ , ( $\$meatCount$  +  $\$dairyCount$ )]
- Display  $\$totalMealCount$

**Add Inventory to Food Bank**

**Task Decomp**

**Lock Types:** Insert into **FoodItem** or **Supplyitem**

**Enabling Conditions:** User is authenticated

**Schemas:** Single

**Consistency:**

**Subtasks:** Mother Task is not needed. No decomposition needed

**Frequency:** Frequent

**Abstract Code**

- The **Add Donation** button is pressed and the *category* ( $\$category$ ), *name* ( $\$name$ ), *quantity* ( $\$quantity$ ) and *expiration date* ( $\$expireDt$ ) fields are valid
- If the  $\$category$  == "personal hygiene", "clothing", "shelter", or "other"
  - Insert a **Supplyitem** for  $\$category$ ,  $\$name$ ,  $\$quantity$ ,  $\$expireDt$
- Else if the  $\$category$  == "vegetables", "nuts/grains/beans", "meat/seafood", "dairy/eggs", "sauce/condiment/seasoning", "juice/drink"
  - Insert a **Fooditem** for  $\$category$ ,  $\$name$ ,  $\$quantity$ ,  $\$expireDt$

## Add/Update Client

### Task Decomposition

**Lock Types:** Insert lock on **Client** if adding, update lock if updating.

**Enabling Conditions:**

**Schemas:** Single

**Consistency:** Mother Task is not needed. No decomposition needed

**Subtasks:**

**Frequency:** Often

### Abstract Code

- If user selects the *Add Client* button:
  - The Add Client Form will be displayed.
  - User will enter the Client's details: *\$Name*, *\$ID\_Description* and *\$PhoneNum*.
  - If User clicks *Save*:
    - A new record with a unique *\$ClientID* and the Client's details will be inserted into the **Client** table.
  - Else if User clicks *Cancel*:
    - All values entered into the Add Client Form will be discarded and no changes will be made to **Client** table.

## Search for Client

### Task Decomposition

**Lock Types:** Read-only lookup on **Client**

**Enabling Conditions:**

**Schemas:** Single

**Consistency:** Mother Task is not needed. No decomposition needed

**Subtasks:**

**Frequency:** Often

### Abstract Code

- If user selects the *Search for Client* button:
  - The Search for Client form will be displayed.

**Phase 1 Report**  
CS6400 – Spring 2017  
Team 081

- The form contains empty textboxes for **\$ClientID**, **\$ID\_Description**, **\$Name** and **\$PhoneNum**.
- If the user hits the **Search** button:
  - The **Client** table will be queried with the values entered into the textboxes on the form.
  - A table showing all records returned in the search will be displayed to the user.
- Else if the user hits the **Cancel** button:
  - The **Search for Client** form will be closed and no search will be performed.
